

# What the \$400,000 push to fluoridate Worcester's water supply will NOT tell you

1. Fluoridation is the most rejected public health program in U.S. history. Last year Fluoridation was on the ballot in no less than forty cities and towns across the country with the majority voting against Fluoridation. Recently in our area, Ithaca NY, Brattleboro VT and Brewster MA defeated Fluoridation. We lost by a few percent of the vote in San Antonio TX with a \$700,000 push by the proponents [sound familiar?] 95% of the world has rejected Fluoridation or not used Fluoride in their water supply. Countries when asked state that they “do not add toxic chemicals” to their water supply.
2. Dental decay rates are lower in the USA in the past 30 years, but so are dental decay rates around the world [95% not fluoridated]. Factors such as good nutrition, improved dental care and maybe the use of fluoridated toothpaste are factors.
3. Modern research has demonstrated that the “benefit” of Fluoride is topical from toothpaste, not internal (systemic) from Fluoridated drinking water. Boston has been Fluoridated since 1978, but still has, according to the newspapers, a “Dental Crisis”.
4. A union of scientists from the EPA has testified at Congressional Hearings that they believe the American public is taking too much Fluoride in their diet and want the U.S. to stop Fluoridation until studies on its safety can be conducted. This same union of EPA scientists testified that the chemicals used to Fluoridate 90% of this nation’s water supply contains Arsenic and lead [proponents claim it meets standards]
5. The chemical used in the Fluoridation of Worcester is a waste product that comes from the “chimney scrubbers” of the phosphate fertilizer companies. They scrub the chimneys to cut down on air pollution.
6. Professors at Dartmouth University studying over 280,000 children in MA where half were drinking Fluoridated water and the other half non-Fluoridated water, found the children drinking Fluoridated water had higher lead levels in their blood.
7. Over 50% of the Fluoride in the water enters your stomach, blood stream, bones and teeth and builds up for life. Some medical reports suggest Fluoride causes bone damage and other diseases.
8. Although 1 part per million sounds harmless, the EPA states that just 4 parts per million is the maximum contaminate level of Fluoride in the drinking water. Just 3 ppm separates the safe from the unsafe.
9. One quart (32 oz) of Fluoridated water equals the same amount of fluoride as in one prescription tablet - which is only given with informed consent.

10. Dental Fluorosis, a non reversible side effect of too much Fluoride, is on the rise in America. This condition alters the forming tooth enamel from normal to white spots and sometimes-brown stains with pitting of the enamel. The Health Department says this is okay and the conditions are only “cosmetic”. Don't you think that you should be able to decide what is “okay” for you and your family?
- 10a. Toothpaste labels warn parents not to let your children take more than a pea size amount of Fluoridated toothpaste. If they do you are told to call the Poison Control Center [thousands do every year]. Read the label yourself.
11. The majority of people in this country and around the world that are fighting Fluoridation do not oppose it on scientific terms, but on the basis of their freedom of choice. Fluoride is the only chemical injected into the water supply that is designed not as a water treatment, but as a treatment for people.

---

Taking an industrial waste product for the rest of our lives AGAINST our will when you can get Fluoride in toothpaste, mouthwash and the dentists office on a VOLUNTARY basis is wrong and is against Health Freedom.

These points are made simple, but are based on available documents. Please visit the following website's for more information:

[www.saveourwater.org](http://www.saveourwater.org) [easy reading]

[www.rvi.net/~fluoride/Natick.htm](http://www.rvi.net/~fluoride/Natick.htm) [full Natick report]

[www.fluoridealert.org](http://www.fluoridealert.org) [national and international news]

After 50 years of pushing Fluoridation 95% of the world says NO. Can it be that big money, endorsements and politics cannot overcome the truth regarding the benefits verses risks of water Fluoridation?

There is no trial period for Fluoridation. Worcester has voted three times against Fluoridation, if we vote it in we will **never** have the legal right to vote it out - thanks to the proponents.

*SUPPORT FREEDOM OF CHOICE  
join the World and keep toxic Fluoride  
out of our water...*
